

Our climate is changing, and flooding is becoming more of a regular occurrence.

Traditionally, home flood protection meant sandbags and hours of hard labour in an attempt to delay the inevitable entrance of water.

All of this has changed. In partnership with PREFA - a world leader in aluminium flood protection systems - RAINSCAPE is proud to announce a range of domestic and commercial flood defence solutions for the South of England.

Contact RAINSCAPE today to learn more about these easy to assemble, fast to protect systems that will help you protect your home in the event of a flood.

Flood Protection Products

Door Barriers

This easy to assemble Door Barrier slots into place in minutes, protecting a standard door up to four metres across with robust aluminium slats, rubber seals and compression clamps. If you learn of a flood, you can secure your entrance in the same amount of time it takes to boil a kettle.

Wall or Landscape Protection Barriers

Are you looking to protect your entire property from floodwaters - garden, yard or driveway? If so, our Wall Barrier solution can extend across a wider expanse. Featuring easy to deploy columns that slot into recessed holes, and wall slats, the Wall Barrier can be fitted on the ground or the top of an existing wall.

Other features

We offer a range of secondary protection products for domestic and commercial buildings: ventilation brick covers and drain covers.

Benefits

- We do the professional survey, design and installation. In the event of a flood, you can quickly assemble the barriers yourself.
- The parts are portable, stackable, and easy to store.
- The PREFA system we use is the only aluminium system on the market, offering unmatched strength with lightweight construction.
- Plus, if you live in a designated flood risk area, you may qualify for government assistance to subsidise a RAINSCAPE/PREFA flood protection system.

Let's be real

The climate is changing, and weather events are becoming more extreme. Flood protection solutions are just one aspect of home security. Rest assured, RAINSCAPE will be honest with you about the capabilities of our systems, and the extent to which they can protect your property.

How it works

- We begin with a site survey, allowing RAINSCAPE to understand your location, property and needs in terms of flood protection.
- We measure the openings and closely examine the installation location to ensure it is suitable.
- We then send the site survey data to PREFA to calculate the required dimensions and equipment for your site.
- After that, we prepare a quotation for you, including installation costs.
- Upon approval, we produce all components from our PREFA stock here in the UK.
- At a time convenient for you, RAINSCAPE will install the equipment and guide you through storage and assembly of barriers, columns and clamps.

About the system

The PREFA aluminium flood protection system includes several parts:

- Mounting rails for door barriers and property protection;
- Centre columns with ground sleeves for wall barriers and perimeter protection
- Easy to assemble, stackable barrier panels with seals;
- Compression clamps for fastening the barrier panels

The aluminium construction of the barrier panels, fasteners and compression clamps offers countless advantages:

- Break-proof;
- Rust-proof;
- Lightweight;
- Weather-resistant; and
- Maintenance-free.
